CONTEXT AND QUESTION

- How do territorial processes together with global market mechanisms affect dairy sheds?

ANALYSIS FRAMEWORK

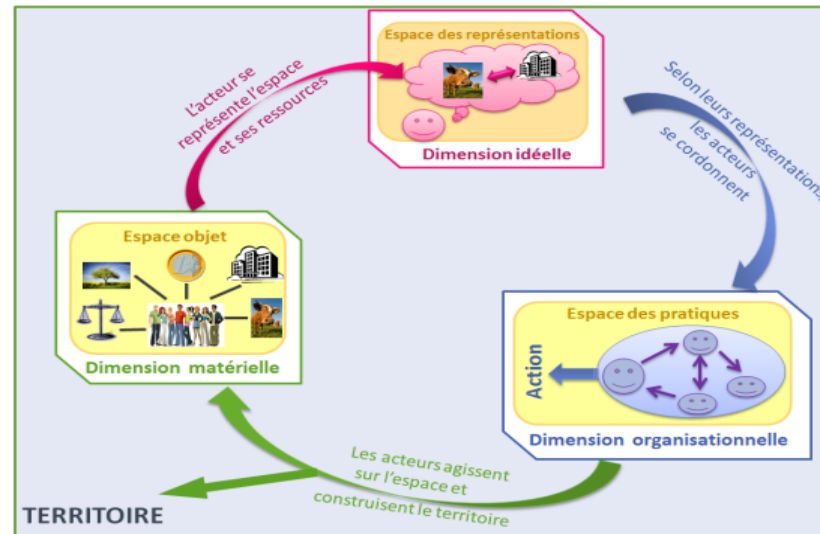

- The dairy shed

- Temporal analysis

- Territory

ARCHETYPAL SITUATION 1: THE PERMANENCE OF THE GLOBALIZATION

- Generic products / agribusiness system / intensive production systems / export
 - Material and organizational conditions allowing the emerging and the development of the dairy shed (Ø cognitive resource)
- Strong support of public policies

➔ **agribusiness and top-down development**

ARCHETYPAL SITUATION 2: THE PERMANENCE OF THE TERRITORIALIZATION

- Specific products / local supply chain (intra-shed demand)

- High diversity of territorial resources mobilized: material, organizational and cognitive

**territorially embedded and
bottom up development**

- Influence of public policies and standards

Poccard R., Carvalho S., 2015. Bassin laitier de Brasil Novo (Brésil). L'émergence d'un bassin laitier localisé sur un front pionnier , In Napoléone et al., Voies lactées

ARCHETYPAL SITUATION 3: CO-EXISTENCE OF GLOBALIZATION AND TERRITORIALIZATION

- Spatial co-presence and/or temporal succession and/or hybridation
- High diversity of material, organizational, cognitive territorial resources
- Co-existence supported by public policies, collective action (role of leaders), local governance

CONCLUSION

- Each form of development articulates specific attributes of the territory, of supply chain and of farming systems
 - Role of food demand
 - Role of collective action (public policies, local governance, social movements)
